- What is the difference between CSS2 and CSS3?

Ans: Unlike CSS2, which was comprised of a single document, CSS3 has its specifications divided into many individual modules, which makes CSS3 a whole lot easier to handle. With CSS3, the designers can now use special fonts, like those available in Google Fonts and Typecast.

- Name a few CSS style components.

- **Ans:** font-size.
- width.
- background-color.
- color.
- border.

- What do you understand by CSS opacity?

Ans: The opacity CSS property sets the opacity of an element. Opacity is the degree to which content behind an element is hidden, and is the opposite of transparency.

CSS assignment question answer

- How can the background color of an element be changed?

Ans: To add background color in HTML, use the CSS background-color property. Set it to the color name or code you want and place it inside a style attribute. Then add this style attribute to an HTML element, like a table, heading, div, or span tag.

- How can image repetition of the backup be controlled?

Ans: To control the repetition of an image in the background, use the background-repeat property. You can use no-repeat value for the background-repeat property if you do not want to repeat an image, in this case, the image will display only once.

- What is the use of the background-position property?

Ans: The background-position property sets the starting position of a background image. Tip: By default, a background-image is placed at the top-left corner of an element, and repeated both vertically and horizontally.

- Which property controls the image scroll in the background?

Ans: The background-attachment property sets whether a background image scrolls with the rest of the page, or is fixed.

- Why should background and color be used as separate properties?

Ans: Why background and color are the separate properties if they should always be set together? There are two reasons behind this: It enhances the legibility of style sheets. The background property is a complex property in CSS, and if it is combined with color, the complexity will further increase.

- How to center block elements using CSS1?

Ans: To centrally align the block elements, we can simply make use of the <center> tag. All the elements within the <center> tag will be centrally aligned.

- How to maintain the CSS specifications?

CSS assignment question answer

Ans: The CSS specifications are maintained by the World Wide Web Consortium (W3C).

- What are the ways to integrate CSS as a web page?

Ans: To style a single HTML element on the page, use Inline CSS in a style attribute. By adding CSS to the head section of our HTML document, we can embed an internal stylesheet. We can also connect to an external stylesheet that separates our CSS from our HTML.

- What is embedded style sheets?

Ans: An embedded style sheet is declared within the <head> element of an XHTML document. It applies to the whole document, rather than just one element. Each style declaration (or CSS rule) gets applied to everything in the document that matches that rule.

- What are the external style sheets?

Ans: An external style sheet is a separate CSS file that can be accessed by creating a link within the head section of the webpage.

- What are the advantages and disadvantages of using external style sheets?

Ans: The advantages of External Style Sheets are as follows :

- With the help of External Style Sheets, the styles of numerous documents can be organized from one single file.
- In External Style Sheets, Classes can be made for use on numerous HTML element types in many forms of the site.
- In complex contexts, Methods like selector and grouping can be implemented to apply styles.

The disadvantages of External Style Sheets are as follows :

- An extra download is essential to import style information for each file.
- The execution of the file may be deferred till the external style sheet is loaded.
- While implementing style sheets, we need to test Web pages with multiple browsers in order to check compatibility issues.

- What is the meaning of the CSS selector?

CSS assignment question answer

Ans: A CSS selector is the first part of a CSS Rule. It is a pattern of elements and other terms that tell the browser which HTML elements should be selected to have the CSS property values inside the rule applied to them.

- What are the media types allowed by CSS?

Ans: audio and video

- What is the rule set?

Ans: A table of instructions used by a controlled interface to determine what data is allowable and how the data is handled between interconnected systems.
